

Satellite evidence review request

Field-priority support | Prepared demonstration scenario

Requested by	District field operations desk
Area of interest	Selected Kosi river corridor, Supaul
Evidence	Two prepared optical scene previews
Required output	Short, reviewable field-priority brief

Questions for review

- 01 What visible differences appear inside the selected river corridor?
- 02 Which observations may indicate expanded surface water or changed access conditions?
- 03 Which road crossings, embankments or settlement edges should be verified first?
- 04 Which conclusions remain uncertain and require field confirmation?

Evidence handling

Keep each observation connected to its source scene and selected area. Distinguish measured values from visual interpretation, and mark any unverified conclusion clearly.

Response requested

Return a concise location summary, the evidence used, and a practical list of field checks. Do not issue a final impact assessment until on-ground observations are available.
