

Evidence report

Illustrative layout preview | single-image | 2026-09-24 | 1.2s

Question

Describe the land cover and major visible features in this image.

Answer

LAYOUT PREVIEW ONLY - NO MODEL RESPONSE. This page demonstrates the report format with a prepared Upper Lake source image. It must not be presented as an analysed result.

Visual evidence

Observation 1: Upper Lake landscape view

2021-11-02

Quality and limitations

- This sample PDF is a layout preview, not an AI interpretation or measured result.
- The 10 m crop cannot resolve features smaller than mixed pixels; no crop cloud mask was applied.
- This wider landscape footprint must not be compared pixel by pixel with the shoreline crop.

- Pagination check: the source scene cloud-cover value does not describe cloud or shadow in this crop. A rendered preview cannot verify the boundary of a mixed pixel, and a source-level cloud estimate must not be treated as a crop mask. The larger landscape footprint also cannot be registered against the smaller shoreline crop by appearance alone. This complete caution is intentionally long so the layout test checks that a paragraph moves together to the next page.

Source observations

1. Upper Lake landscape view | 2021-11-02

Sensor: optical

Source ID: S2A_MSIL2A_20211102T052001_R062_T43QGF_20211103T160449

Raster: 512x512 crop, 10 m, B02/B03/B04/B08 surface reflectance (DN/10000). Same source scenes as the shoreline pair; wider, different footprint. No cloud mask.

Bands: blue, green, red, nir

Scene cloud cover: 0.03% (not a cloud mask for this crop)
